**SILENT DEMOLITION!**

**DEEP WALL 1200 mm thick  
REINFORCEMENT  $\phi$  32mm**

• demolition works • pile breaking • pilehead cutting • diamond drill bits • diamond saws

**Avenue 2 Maastricht  
Strukton Ballast Nedam**

# Blijleven Demolition is the first company in the Netherlands and Europe to have a deep wall cracker!

Blijleven demolition is very versatile when it comes to working with concrete. For Heijmans Civiel Blijleven cracked the top metre of a 3.6 km diaphragm wall using a newly developed machine. This machine serves as a replacement for the pneumatic hammer, which is a real innovation in the field of working conditions. Not only is machine noise greatly reduced, it works faster and provides improved quality.

The second innovation in the field of working conditions is a special pneumatic drill on a crane that Blijleven used at Vleugel RSS. A total of 3,000 horizontal holes are drilled in the concrete walls and the cuttings are glued together.

The third innovation in the field of working conditions is a bush hammer on a crane to obtain an even diaphragm wall. Labour-intensive work is gradually reduced as we invent machines to make work more pleasant and to reduce its physical impact.

Detailed information about our activities is provided on our website at [www.blijleven.info](http://www.blijleven.info).
